

Corporate Operations & Site Directory

Internal knowledge-base artifact for demonstration use

Document ID	ING-CORP-001
Effective date	02 March 2015
Classification	Internal - General Operations
Document owner	Office of Corporate Operations, InGen Technologies
Status	Controlled reference copy

Purpose. Provide a single operational reference for InGen organizational ownership, active sites, legacy sites, escalation boundaries and document-routing responsibilities.

Scope. Applies to InGen employees, contractors and Masrani personnel who interact with InGen scientific, security or island operations.

Dataset notice: This is a fan-made, synthetic enterprise document created for a RAG portfolio demo. Canonical names, locations and major franchise events are used as factual anchors; internal controls, document IDs, process detail and management language are original synthetic content.

1. Company profile

International Genetic Technologies (InGen) is a biotechnology organization founded by John Hammond. Its early research program focused on recovering prehistoric genetic material from preserved biological samples and developing viable living animals from incomplete ancient genomes. InGen maintains its principal corporate base in San Diego, California.

Corporate ownership. Following Hammond's death, Masrani Global completed the acquisition of InGen in 1998. InGen continues to operate as the group's specialist genetics and bioengineering organization. The scientific program is led by Dr. Henry Wu, while InGen Security operates as a separate risk and containment function.

2. Operating model

Function	Primary accountability	Key interface
Genetic Research	Genome reconstruction, viability, phenotype review, reproductive-risk analysis	Jurassic World veterinary and asset teams
InGen Security	Protective services, asset containment support, contingency planning	Jurassic World Operations / Mascom communications
Systems & Infrastructure	Scientific systems, access control, internal applications, data continuity	Security and research functions
Corporate Risk & Legal	Risk acceptance, incident governance, evidence retention, regulatory coordination	Masrani Global leadership
Operations Liaison	Coordinates InGen responsibilities with the Jurassic World resort on Isla Nublar	Park Operations and guest-safety teams

3. Primary sites

Site	2015 status	Primary use	Access posture
San Diego, California	Active	Corporate headquarters, genetics administration, records and executive functions	Standard controlled corporate access
Isla Nublar, Costa Rica	Active	Jurassic World scientific support, asset programs, containment and park liaison	Credentialed island access; zoned restrictions
Isla Sorna - Site B	Legacy / restricted	Former breeding and production location; legacy records and biosecurity concern	No routine staff access; exception approval required
Global sample network	Active	Amber and biological sample acquisition supporting the genomic library	Project-specific access and chain-of-custody controls

4. Leadership and responsibility map

Role	Named lead	Decision boundary
Founder / historical executive sponsor	Dr. John Hammond	Historical origin of InGen and the original Jurassic Park program
Masrani Global CEO	Simon Masrani	Parent-company strategic and investment decisions
Lead genetic biologist	Dr. Henry Wu	Scientific direction, genetic asset development and research review
Head of InGen Security	Vic Hoskins	Security doctrine, contingency services and containment-support readiness
Jurassic World senior asset management	Claire Dearing	Park asset portfolio and operational coordination

5. Escalation classes

Class	Definition	Required response
Green	Routine operational issue with no animal, safety or data-integrity impact	Local owner resolves and records in normal work tracking
Amber	Degraded control, contained asset concern or system issue with credible escalation potential	Notify function lead; initiate documented risk review
Red	Confirmed containment loss, material security breach, or loss of a safety-critical control	Activate incident command; Security and Operations jointly coordinate
Black	Multi-system failure with uncontrolled animal, guest or enterprise impact	Executive incident command; emergency authorities and parent-company leadership engaged

6. Controlled reference set

- ING-SEC-204 - Asset Containment & Emergency Response Standard.
- ING-GEN-118 - Genetic Asset Development & Reproductive Risk Review.
- ING-RISK-093 - Post-Incident Review: Jurassic Park Systems Failure, Isla Nublar.
- ING-SITEB-310 - Isla Sorna (Site B) Legacy Operations & Biosecurity Review.

7. Knowledge-base use

Authority rule. When two internal documents appear to disagree, the more specific document controls within its domain, and the most recent effective revision controls unless a historical incident record is being consulted for evidence. Historical records must not be interpreted as current policy.

Site rule. Jurassic World guest operations occur on Isla Nublar. Site B on Isla Sorna is a legacy location and must not be treated as an active public resort or routine production facility in 2015.

Canon and official source basis

The sources below were used only to anchor canonical facts. The document text itself is newly written and synthetic.

- Film canon: Jurassic Park (1993); The Lost World: Jurassic Park (1997); Jurassic Park III (2001); Jurassic World (2015).
- Amblin - Jurassic Park (1993) film page: remote-island park with genetically recreated dinosaurs.
- Amblin - The Lost World: Jurassic Park (1997): Isla Sorna / Site B described as a second island and abandoned former InGen location.
- Amblin - Jurassic Park III (2001): Isla Sorna described as InGen's former breeding ground.
- Masrani Global archived official viral material: InGen headquarters in San Diego; Hammond as founder; Masrani acquisition in 1998; Dr. Henry Wu guiding InGen science; Jurassic World construction and opening timeline.
- Masrani Global archived official viral material: InGen Security headed by Vic Hoskins.
